

# **Library Management System**

**Branch: CSE**

**Section: 6**

**Batch No: 02**

**Student Roll No's :24B11CS191**

**24B11CS027**

**24B11CS210**

**24B11CS105**

**Student Name's : K. Venkatesh**

**B. Chaitanya**

**K. Rupesh**

**D. Jashuva**

**Faculty Name: BHEMUNI SAI VENKATA GANESH**

## **Introduction**

The Library Management System is a desktop application designed to manage library records efficiently. It helps organizations store, retrieve, update, and delete library information electronically.

The system replaces manual record-keeping and improves accuracy, security, and accessibility of library data.

This application is developed using:

- Java (Core Java)
- Swing (GUI)
- JDBC
- Oracle Database

## **Problem Statement**

In many organizations, library information is maintained manually using paper records or spreadsheets. This leads to:

- Data redundancy
- Difficulty in searching records
- Time-consuming updates
- Risk of data loss

Therefore, there is a need for an automated system to manage books records efficiently.

## **Objectives of the Project**

The main objectives of the project are:

- To store library books information in a database
- To add new books
- To update/ delete existing admin details.
- To delete or edit existing books
- To display books information in an easy-to-use interface
- To add new staff
- To delete/ edit existing staff details

## **Scope of the Project**

The system can be used in:

- Universities
- Colleges
- Schools
- Private Libraries

The system will allow authorized admin / user to manage library information through a desktop application.

## **Modules Description**

The Library Management system consists following Modules:

### **1. Admin Management Module**

This module manages admin information in the database. It allows the admin to login into his account and can access details of library books, staff . It allows admin to add new books, edit and remove existing books. It performs database operations such as insert, update, delete, and select.

### **2. Books Management Module**

This module manages books information available in library. It stores every books by a ID. It allows user to add new books, delete and edit existing books.

### **3. Staff Management Module**

This module manages all staff members details. I allows admin to add new staff, remove and delete existing staff details.

#### **4. Search Module**

This module allows the user to search for books information using Book ID or Author Name or Book Name. It retrieves the required book details from the database and displays them to the user/admin.

#### **5 Database Connectivity Module**

This module connects the Apache Netbeans application to the MySQL database using My SQL Connector. It is responsible for establishing database connection, executing SQL queries, retrieving data, and closing the connection.

#### **6. User Interface Module**

This module provides the graphical user interface (GUI) using Java Swing. It allows the user to interact with the system by entering admin details, performing operations, and viewing results.

#### **7. Display Module**

This module displays books , staff and admin information in a structured format, usually in a table. It retrieves data from the database and presents it clearly for easy understanding.

### **Database Design**

Database design is the process of organizing data into tables, defining relationships between tables, and specifying constraints to ensure data integrity and efficiency. The Library Management System uses a relational database to store and manage admin, books and staff information.

The database is designed using the **Relational Database Model** and implemented using **MySQL Database**.

The main objective of database design is to:

- Store book information efficiently
- Avoid data redundancy
- Maintain data integrity
- Provide fast access to books

Based on system requirements, the following entities are identified:

1. Admin
2. Books
3. Staff

Each entity is represented as a table in the database.

### 1. Admin Table:

The Admin table stores information about admins who can access library details in the organization.

Column Name	Data Type	Description	Constraint
USER_ID	INTEGER	Unique user ID	Primary Key
NAME	VARCHAR(50)	Name of Admin	Null
PASSWORD	VARCHAR(50)	Password of that admin	Null
CONTACT	VARCHAR(10)	Contact of admin	Null

**Primary Key:** USER\_ID

### 2. Book Table:

The Book table stores information about books available in library.

Column Name	Data Type	Description	Constraint
BOOK_ID	INT	Unique book ID	Primary Key
CATEGORY	VARCHAR(50)	Category of book	Null
NAME	VARCHAR(50)	Book name	Null
AUTHOR	VARCHAR(50)	Author name	Null
COPIES	INT	Number of copies available	Null

**Primary Key:** BOOK\_ID

### 3 . Staff Table:

The Staff table stores information about staff member details in library.

Column Name	Data Type	Description	Constraint
STAFF_ID	VARCHAR(50)	Unique staff ID	Primary Key
NAME	VARCHAR(50)	Name of staff	Null
CONTACT	VARCHAR(50)	Contact of staff	Null

**Primary key:** STAFF\_ID

#### SQL Commands Used to Create Tables:

##### **Create Admin Table:**

```
CREATE TABLE admin (USER_ID INT PRIMARY KEY,  
                     NAME VARCHAR(50),  
                     PASSWORD VARCHAR(50),  
                     CONTACT VARCHAR(10),  
                     );
```

##### **Create Books Table:**

```
CREATE TABLE books (BOOK_ID INT PRIMARY KEY,  
                    CATEGORY VARCHAR(50),  
                    NAME VARCHAR(50),  
                    AUTHOR VARCHAR(50),  
                    COPIES INT);
```

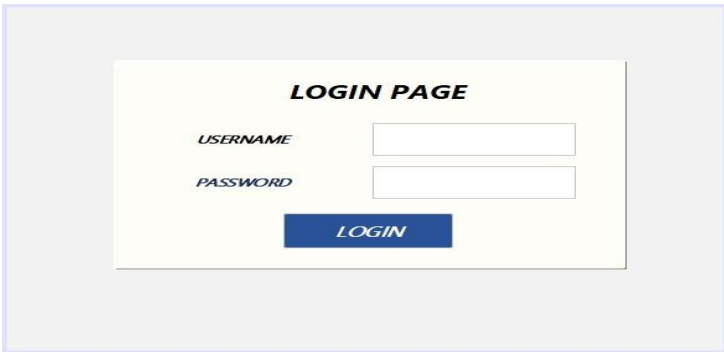

##### **Create staff Table:**

```
CREATE TABLE staff (STAFF_ID VARCHAR(50) PRIMARY KEY,  
                    NAME VARCHAR(50),  
                    CONTACT VARCHAR(10));
```

### **User Interface Design**

#### **Login window:**

This window allows admin to enter their username and password to access the Library Management System.

The image shows a login window with a light gray background. Inside the window is a white rectangular area containing the text "LOGIN PAGE" in bold. Below this, there are two labels: "USERNAME" and "PASSWORD", each followed by a white input box. At the bottom of the white area is a blue button with the word "LOGIN" in white capital letters.

### Dashboard Window:

This window provides navigation options to perform different operations such as adding, updating, deleting, searching, and viewing admin, books and staff records.

### Add Books Window:

This window allows the admin to enter and save new book details into the database.

---

**ADD BOOKS**

<b>BOOK ID</b>	<input type="text"/>
<b>CATEGORY</b>	<input type="text"/>
<b>NAME</b>	<input type="text"/>
<b>AUTHOR</b>	<input type="text"/>
<b>COPIES</b>	<input type="text"/>

---

### Staff Details Window:

This window enables the user to access the staff details from staff table.

STAFF_ID	NAME	CONTACT
S001	CHAITANYA	7869504329
S002	RUPESH	8247601934
S003	JASHUVA	9028748190

### **Books Available Window:**

This window displays all books records in a tabular format for easy viewing and management.

BOOK_ID	CATEGORY	NAME	AUTHOR	COPIES
1001	BIOLOGY	REPRODUCTIV...	REBECCE RO...	15
1002	GEOGRAPHY	CONCEPTS OF...	TIM MARSHALL	14
1003	HISTORY	VYASA MAHAB	VEDA VYASA	20
1004	JAVA	COMPLETE JAVA	KATHY SIERRA...	9
1005	SCIENCE	COSMOS	CARL SAGAN	10
1006	DATA STRUCT...	ALGORITHMS ...	NARSHIMA KA...	15
1007	ARTIFICIAL INT...	INVENTIONS O...	KRISHNA MAN...	12
1009	MATHS	FUNDAMENTA...	DIVYA	10
1010	ADVANCED DA	ALGORITHMS	REBECCE RO...	7
